ROBERT MUNSON

ENGINEERING LEADERSHIP | PRODUCT & PLATFORM STRATEGY | AI & DATA ENABLEMENT

Gainesville, FL | 352.256.4826 | robmunson@gmail.com | linkedin.com/in/rob-munson | munsonrobl.github.io

LEADERSHIP PROFILE

Engineering leader with organizational scope spanning 30+ engineers across product and platform teams. Develops engineering managers, guides organizations through change, and aligns technology investment with business priorities, advancing revenue-generating products while using automation to reduce costs and improve operational efficiency. Combines hands-on technical depth with leadership across software, data, and AI, backed by deep experience in civil infrastructure technology serving state and local agencies and contractors.

EXPERIENCE

INFOTECH

2010–PRESENT

Associate Director of Engineering DEC 2025–PRESENT

- Lead four engineering managers across a 30+ person engineering and design organization spanning five product teams, a platform team, two to three contractor teams, and dedicated SRE and frontend functions.
- Shape roadmap, capacity, headcount, and compensation decisions with the CPO, CTO, Director of Engineering, and functional leaders; contribute to budget allocation, promotions, and resource planning while balancing internal equity and compa-ratio positioning.
- Guide technology strategy across 8+ core products and 12+ platform services and third-party integrations—including identity, payments, messaging, tax, and verification—supporting hundreds of thousands of users across nearly 200,000 organizations.
- Coach engineering managers on developing their teams, handling performance decisions, and sustaining engineering standards through changing organizational priorities.
- Built AI proficiency across engineering teams through practical guidance, training, and shared development workflows.
- Led AI adoption across Customer Success, Product, and Design, introducing practical workflows for product discovery, customer support, and delivery.
- Owned technical due diligence for a product acquisition, evaluating the stack and risks and presenting findings to executives; completed integration in under three months, aligning product design, transferring infrastructure while maintaining service continuity, integrating SSO, and incorporating the engineering team.
- Earned trust as a discreet engineering partner to executives and private-equity operating partners through ownership and organizational change, absorbing ambiguity, translating shifting priorities into clear direction, protecting team focus, and identifying critical talent.

Assistant Director of Engineering SEP 2022–NOV 2025

- Turned around the Bid Express and Appia engineering teams, temporarily leading both through leadership transitions, rebuilding cohesion, and preparing successors to take ownership; established DORA-based accountability that reduced lead time for changes by 30% and change failure rate from 18% to 8%.
- Served as acting lead for the platform team while developing and promoting a senior developer into the Engineering Lead role, transferring day-to-day ownership and establishing a durable succession path.
- Brought the organization’s first data-as-a-service (DaaS) offering from architecture evaluation through launch, coordinating engineering delivery, technical documentation, and sales enablement.
- Built the business case for early GitHub Copilot adoption through a pilot, training, and shared practices; an engineering survey found 5+ hours saved per developer weekly—an estimated 12.5% capacity gain and $55K in monthly productivity value across 30 engineers—informing budget decisions and broader AI investment.
- Managed security updates, technical debt, and quarterly enhancements for products outside active development, sustaining reliability and customer value within lean maintenance budgets.

INFOTECH

2010–PRESENT

Senior Lead Software Engineer

NOV 2020–AUG 2022

- Built the organization's dedicated platform team, establishing shared services, architecture guidance, and engineering delivery support for product teams.
- Drove the establishment of a centralized data warehouse for internal analysis and reporting that later became the foundation for the company's DaaS offering and the data layer powering customer-facing AI functionality.

Lead Software Engineer

APR 2018–NOV 2020

- Built and managed a software team while remaining a hands-on contributor, leading hiring, performance management, and technical direction for all product enhancements across architecture, data models, APIs, infrastructure, and technical debt.
- Directed Signet architecture and engineering practices, standardizing containerized development and carrying the same application images through automated production delivery.

Senior Software Engineer | Software Engineer II | Software Engineer

NOV 2010–APR 2018

- Led developers and designers through an on-schedule six-month Doc Express rewrite, introducing configurable workflows and templating and migrating customers and production data; the architecture has scaled for more than a decade as monthly document submissions grew 15x, from approximately 4,000 to more than 60,000.
- Built shared OAuth2 SSO, account management, billing APIs, and support tooling that became the backbone of identity and platform capabilities across the product portfolio.
- Modernized Bid Express through framework upgrades and database tuning, migrated file storage to AWS S3, and integrated the product with new platform APIs and SSO.

JONES EDMUNDS

2004–2010

Application Developer / Database Administrator

- Worked directly with department leaders to translate operational needs into custom software, owning requirements, design, and implementation to improve productivity and reduce administrative overhead.
- Built business applications, databases, and reporting systems that automated environmental-compliance workflows and improved physical-records management.

QUICKMAX INC

2002–2004

Web Programmer / Designer

- Gathered requirements, designed, and developed CMS-driven websites, e-commerce solutions, and custom web applications; modernized a legacy ASP application in C# ASP.NET.

LEADERSHIP AND TECHNICAL FOUNDATION

Leadership and operating environment: Manager development, organizational design, hiring, performance management, succession planning, employee and contractor team leadership, multi-product SaaS portfolios, product and platform strategy, executive partnership, product-acquisition technical due diligence and integration, PE-backed organizational change, budget and capacity planning

AI-enabled engineering and products: AI-assisted software delivery, spec-driven development, engineering AI enablement, customer-facing AI capabilities, cross-functional AI workflows, AI evaluation and human oversight

Architecture, data, and cloud: AWS, cloud-native SaaS, APIs and integrations, OAuth2 and identity, PostgreSQL, SQL Server, Redshift, data warehouses and data lakes, data as a service, containerization

Engineering practices and technology: GitHub Actions, CI/CD, TDD, production reliability, observability, performance optimization, technical-debt management, security and privacy, WCAG accessibility practices, Ruby/Rails, JavaScript/Vue, C#/.NET, Python, SQL

EDUCATION

Santa Fe College | AS, Computer Programming and Analysis; AA | 2002–2004
